

The Jomar Difference

- The Jomar Group has been committed to providing you with the widest range of innovative, quality products for over 40 years.

- Partnering with Fratelli Pettinaroli SpA, with over 70 years experience in product development, engineering and manufacturing, allows us to provide superior quality and timely delivery.

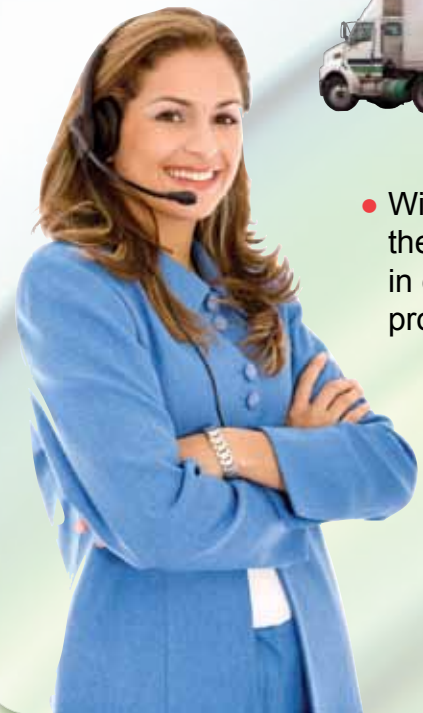

- With 13 stocking warehouses located across the US and Canada and sales representatives in every state, our competitively priced products can be easily found.

- Our advanced inventory control system facilitates high fill rates to maintain customer satisfaction.

- Our technically trained, friendly customer service staff are available to address your needs.

QUALITY

VALUE

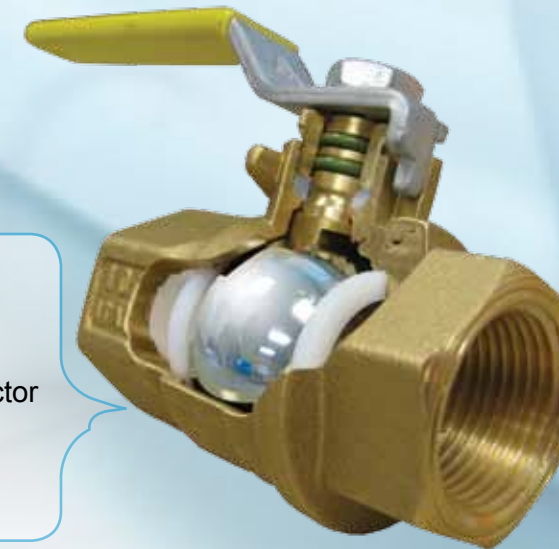

Jomar Valve is a leading supplier of innovative valves and component solutions to industries around the world. Jomar's diverse products support a wide variety of Industrial, Plumbing, Utility, HVAC and Process Control applications

Jomar's innovative Tankless Water Heater valve kit features a unique, multi-flo, patented design allowing you to go from supply to drain with a 1/4 turn of a single lever handle. It's compact, sleek, professional looking design is easy to operate and install.

Quality starts with Jomar's T/S100-NE. Engineered using 2 Viton® o-rings and a teflon follower gland, this design out performs traditional stem designs by a factor of 3:1. The T/S-100NE carries all industry certifications and serves as the standard design in the entire Jomar line of valves.

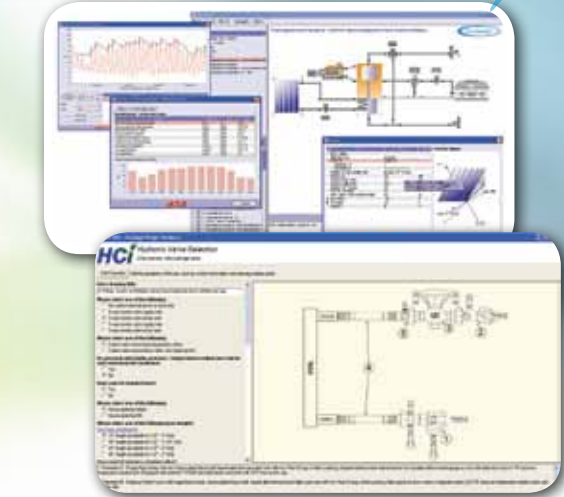

HCI's Package Design Software (PDS) and Evosolar's Polysun Software offer powerful but simple to use package design software to help with system design and ordering. Evosolar and HCI also offer CAD support, providing tremendous value to every project.

Add-A-Valve® is an innovative way to replace or repair a defective valve or pipe, add a line or isolate an area in 30 minutes or less. The Add-A-Valve® works by literally cutting through copper tubing with it's hardened steel stem cutter and expanding it's Viton® seal across the cut to stop flow.

Evosolar, the Jomar Group's new solar division started in 2007, offers a full range of solar thermal solutions for commercial and residential applications. With a broad range of storage tank options, highly efficient collectors, innovative pumping solutions, and several certified glycol and drainback system configurations, Evosolar is a single source for all your solar project needs.

Hydronic Components, Inc. has lead the balancing and coil piping package industry since 1995. The Terminator System® coil piping packages has revolutionized hydronic installations by using quality engineered combination valves to minimize the time and space required to install hydronic terminal units. HCI components are 100% leak tested and are bagged and tagged into a single package for easy installation. Less installation time, less space, less components with fast reliable deliveries all backed by our 5-year warranty.

INNOVATION

Jomar History

Serviceman to Civilian

A former Navy Commander flying submarine reconnaissance in the South Pacific, Joseph Martin began his civilian career in 1958 as a sales representative for a Midwest tool & die manufacturer. With hard work and a passion for customer service, Martin formed J. Robert Martin Inc in 1961. By 1984, the company had grown to be a market leader in selling and distributing plumbing and heating products throughout the Midwest.

strong network of direct and specialized sales representatives.

Today

Jomar continues to be an innovative supplier to a wide variety of industries. Recent innovations include Lead Free Products, Patented Tankless Valve Kits, and Gas By-Pass Valves.

Jomar was founded on innovation, building relationships and finding a better way to get the job done. We are dedicated to continuing Joseph Martin's legacy by offering high quality products and service with consistency and integrity.

A Partnership Begins

By the late 80's, Martin sensed a need for high quality ball valves that could meet all industry standards and during a trip to Italy met Giuseppe Pettinaroli, founder of Fratelli Pettinaroli SpA. That meeting lead to the development of Jomar's flagship product the T/S-100 and a long lasting relationship that has kept Jomar on the cutting edge of **quality**, **innovation** and **value** for many years.

Innovation to Opportunity

In the mid 90's, Jomar formed HCl to develop a product to reduce the amount of labor and components used to connect supply and return lines to a fan coil. The Terminator System® quickly became the preferred method and several patents ensued.

Driven by increasing energy costs and industry trends towards with use of "Green" products and technology, Jomar opened Evosolar. Offering a complete line of solar thermal products for both commercial and residential applications, Evosolar utilizes Jomar's
