

LEAD & BISMUTH
FREE ALLOY

ISSUES WITH LEAD FREE,
BISMUTH BASED ALLOYS?

NO SWEAT!

Many valve manufacturers produce bismuth based, lead free valves. Bismuth based, lead free valves are prone to performance issues, specifically cracking in press and solder valves.

SWITCH!

Unlike other manufacturers, Jomar Valve uses a binary alloy which performs like standard brass, which is stronger and resistant to cracking. All of our products contain zero bismuth, a foreign additive. Contact your Regional Sales Manager or Jomar Customer Service Representative about Jomar lead free products.
