

LEAD & SILICON
FREE ALLOY

ISSUES WITH LEAD FREE,
SILICON BASED ALLOYS?

NO SWEAT!

Many valve manufacturers produce silicon based, lead free valves. Silicon based, lead free valves commonly have performance issues in the field, especially when soldering.

SWITCH!

Unlike other manufacturers, Jomar Valve uses a binary alloy which performs like standard brass, which is stronger and resistant to cracking. All of our products contain zero silicon, a foreign additive. Contact your Regional Sales Manager or Jomar Customer Service Representative about Jomar lead free products.
